International Journal of

Operations & Production Management

The *International Journal of Operations & Production Management (IJOPM)* covers all aspects of operations management, with a key focus on topics which have substantial management content. *IJOPM* looks at the managerial problems of developing and implementing operation systems and has become a widely respected resource in a complex and increasingly important field.

Coverage includes:

Operations planning, scheduling and control; operations strategy; new product and service/design development; supply chain management; and performance measurement and management.

Benefits and features

- *IJOPM* publishes current, high quality research papers and topical special issues that undergo a rigorous but constructive review by international experts in the field.

The official journal of the European
Operations Management Association

This journal is indexed by

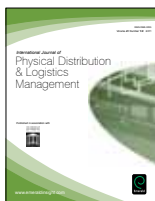

“International Journal of Operations & Production Management is one of the best operations management journals to address both academic rigour and practical relevance. As an applied researcher, this makes *IJOPM* one of my preferred choices for publication.”

Journal of

Science and Technology Policy in China

The rise of China is reshaping the global "science and technology landscape" and is having a great influence on the policies of the world's governments, industrial firms, and universities. The significance of these developments affects the future growth and the competitive position of China within the global economy, which will be discussed in the research papers submitted to the Journal of Science and Technology Policy in China (JSTPC).

Coverage includes:

JSTPC publishes research articles in the field of policy and management of innovation, R&D, science and technology relative to China under the globalized context.

Benefits and features

- JSTPC aims to offer a fluid debate on science and technology issues in the hope of influencing the wider community of policy makers and contributors.

Journal of

Technology Management in China

China's accession to the World Trade Organization has led to opportunities and challenges for international communities. Many failed international joint ventures indicate that, to some extent for foreign firms, operating in China is risky. The *Journal of Technology Management in China (JTMC)* is committed to publishing research within the technology and knowledge transfer, technology and business strategy and technology management fields in China.

Coverage includes:

Technology management; technology transfer; Chinese business and culture; knowledge transfer and sharing; technology economics and business strategy; and entrepreneurship and innovation management.

Benefits and features

- The only journal to focus exclusively on research of technology management and technology transfer in China.
- The journal encourages theoretical and applied research papers which identify good practice.

Strategic Outsourcing

An International Journal

***Strategic Outsourcing: An International Journal (SOIJ)* provides an authoritative and independent forum for the critical evaluation and dissemination of research relating to the design, implementation and undertaking of strategic outsourcing, placing a strong emphasis on applied research with relevant implications for both knowledge and practice.**

Coverage includes:

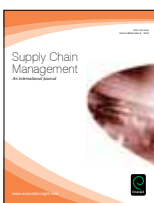

New business/process/operations models; business process reengineering; localization issues and international management; supplier/partner selection; and collaboration and supply chain management.

Benefits and features

- Multidisciplinary and interdisciplinary perspectives from all relevant sectors and subject fields ensure broad applicability and interest.
- International and cross-cultural coverage provides insight into the differences in outsourcing practice across regions and countries.
- Research by leading authors in the field, such as Douglas Brown, Erran Carmel, Bill Hefley, Mary C. Lacity, Ronan Mclvor and Leslie P. Willcocks.

Supply Chain Management

An International Journal

Supply Chain Management: An International Journal (SCM) publishes multidisciplinary research which extends beyond the buyer-supplier interface. The journal aims to encourage the development and implementation of supply chain systems which achieve higher levels of service and substantial savings in costs.

Coverage includes:

Contractual relationships; data interchange and vertical integration; Just-in-time; and risk management.

Benefits and features

- A high journal impact factor signifies that the papers published are drawn on by other academics in the field.

- Insights from industry provide practitioners and researchers with an understanding of the latest developments and best practice in the field.
- High quality, multi-disciplinary research papers further thought and encourage future research.
