

INDEX

- Abusive supervision, 73
- Accelerometer data, 144–145
- Acceptance and commitment therapy (ACT), 8
- Acute adversity/stress, 37–38
- Acute stress, 28
- Adaptability, 31–32, 36
- Adaptive capacity, 58–59
- Adaptive coping, 20–21
 - mechanisms into process of developing resilience, 36–38
- Adversity, 26–29, 36–37
 - in resilience, 29–30
- Affect, 138
- Affective Events Theory (AET), 157, 182–183
- Affective inertia, 140
- Affective reactivity, 141–142
- Affective variability, stability, and spin, 141
- After Action Reviews (AARs), 60–61
- Age stereotypes, 99–100
- Analytic techniques, 194
- Anger, 76
- Anxiety, 76
- Appraisal of negative event, 36
- Appreciative jolts, 52
- Attractors, 194
- Audience, 59–60
- Autocorrelation, 159
- Autoregressive cross-lagged models, 162
- Autoregressive distributed lag models, 162
- Autoregressive latent trajectory models, 162
- Baby Boomers, 91
- Baltimore Longitudinal Study of Aging, 162
- Big Five personality traits, 4
- Bluetooth, 146
- Boomers, 91
- Bounce-back, 22
- C++, 168
- Career model, 68
- Career stage model, 85
- Challenging jolts, 52
- Change, 156–157
- Chronic adversity/stress, 38
- Chronic circumstances, 32
- Chronic stress, 28
- Civil Rights Act of 1964, 91
- Cognitive agility, 58
- Cognitive appraisal and coping, 30
- Cognitive restructuring, 58
- Cognitively processing crucibles, 51–52
- Cohesion, 55
- Comparative fit index (CFI), 160
- Compensation strategies, 93
- Computational modeling, 167–173
- Conscientiousness, 3–4
- Construct validity, 147
- Continuous time models, 191
- Continuous time structural equation modeling (CTSEM), 106, 117
 - additional options and considerations, 126–128
 - caveats to, 129–130
 - model output and fit, 124–126
 - model specification and fitting, 123–124

- in occupational health research, 118
 - preparing data, 121–123
 - tutorial, 119–129
- Continuous time vector autoregressive models (CVAR models), 191
- Coping, 21, 30
 - behaviors, 73
 - strategies, 74
- Corporate Audit Staff (CAS), 57
- Counterproductive work behaviors, 3
- Covariance, 156–157
- Cross-lagged panel models, 115–116
- Cross-lagged VAR models, 188–190
- Crucible, 48–52
 - cognitively processing crucibles, 51–52
 - events, 50
 - experiences, 49–51
 - institutionalized crucibles, 56–62
 - stress and, 52–56
- Cybernetic theory, 73

- Daily hassles, 38
- Decay of training effects, 39
- Definition variables, 117
- Density distributions, 142–143
- Development, 49
- Discrepancy, 68–72, 169
 - feedback, 68, 71
- Discrete-time parameters, 109
- Distress, 53
- Disturbances, 76
- Dual change score models, 162
- Dual-pathway model of resilience, 30, 32
- Duration, 26, 29
- Dynamic models, 190, 193
- Dynamic theory, 170

- Effect detectability, 110
- Ego-resiliency, 22
- Emergent resilience, 32, 36
 - pathway, 29
- Emotional exhaustion, 59
- Emotional inertia, 140
- Emotional responses, 183

- Episodic adversity/stress, 37
- Episodic stress, 28
- Equilibria, 194
- Ergodicity, 184
- Esprit de corps, 55
- Ethics & risk management, 61–62
- Eustress, 53
- Experience sampling methods/ methodology (ESM), 138, 183
 - in empirical studies, 138
 - passive sensors to track variability, 144–148
 - variability in self-reported well-being, 139–144
- Expertise and achievement, goals of, 80–81

- Family interfering with work life (FIW), 98
- Fast Fourier Transform (FFT), 164
- Feedback loops, 8–10, 74
- Fluid intelligence, 97
- Frequency, 26, 29
- Frustration, 76
- Full information maximum likelihood estimator (FIML estimator), 121
- Future-focused behaviors, 39

- Generation Z, 91
- Generational differences at work, 90
- Generational perspective, 91–92
- Generational scholars, 91
- Generations, 99–100
- GenMe, 91
- GenXers, 91, 95
- GenY, 91
- Geolocation, 144
 - tracking, 145–146
- Global positioning system (GPS), 146
- Goals
 - commitment, 71
 - of establishing non-work identity, 82–83

- of expertise and achievement, 80–81
 - goal-striving, 68, 70
 - pursuit, 68–69
 - of sustaining stable work life, 81–82
- Grit, 58
- Growth models, 157–159
- Guided development, 60–61

- Handling time, 111–114
- Hardiness, 22, 58
- Heteroscedasticity, 159
- Hierarchical linear models (HLM), 157
- Horizontal bonding, 55
- Human development, 92
- Hyperstress, 53

- Idiographic methods, 184–196
- Incivility, 73
- Inertia, 140, 188
- Institutionalized crucibles, 56
 - audience, 59–60
 - developmental and exploration target, 58–59
 - ethics & risk management, 61–62
 - guided development, 60–61
 - planning considerations, 57–62
 - purpose, 57
 - simulation, replication, & stress, 59
 - time horizons, 60
- Intensity, 26, 29
- Intercept mean, 160
- Intercept variance, 160
- Interpersonal stressors, 73
- Intraindividual trajectories, 93

- Job
 - applying PAWS model to job crafting, 12
 - autonomy, 96
 - insecurity, 76, 96–97
 - satisfaction, 94–95
 - seeker, 69–70
- Jolts, 52

- Kolb's Experiential Learning Theory (1984), 51

- Latent change score models (LCS), 115–116, 156, 159–163
- Latent difference score models (*see* Latent change score models (LCS))
- Latent growth curve models, 115–116, 156
- Lazarus' transactional theory of psychological stress, 157
- Lifecycle, 99
- Lifespan development perspective, 92–94
- Lifespan perspective inform generational research on well-being, 94–98
